ABOUT US

Who We Are

Almoosa Security Systems is part of Salem Ahmad Almoosa Enterprises, established in Dubai in the early 1970s by H.E. Salem Ahmad Abdullah Almoosa. Building on this longstanding UAE business heritage, we provide specialised security, ELV, networking and IT solutions.

As a SIRA-licensed security systems provider, we design, install and maintain integrated technology solutions for businesses and properties across the UAE, from consultation and system design to commissioning and ongoing technical support.

Why Choose Almoosa?

WHAT SETS US APART

Integrated Solutions

We bring together security, ELV, networking and IT systems to deliver fully integrated, reliable solutions with seamless operation.

Technical Expertise

Our experienced specialists provide precise engineering, professional installation and dependable technical support.

Tailored to Your Needs

We design practical, scalable solutions around your property, operational requirements and future expansion.

SIRA-Licensed CCTV Expertise

We deliver CCTV solutions in accordance with applicable SIRA requirements, including professional installation, pre-inspection checks and certification coordination.

Integrated **solutions**

From intelligent surveillance and access control to networking, IT and communication systems, Almoosa Security Systems delivers integrated technology solutions designed to work together.

CCTV & video surveillance

Intruder alarm

Access control

Gate barrier systems

ANPR

Structured cabling

Enterprise Wi-Fi & networking

Managed IT

Servers & storage

Backup & data protection

IP telephony & PABX

Audio visual & PA

CCTV Design, Installation & Support

We design, install and maintain IP CCTV systems for buildings and business sites. From coverage planning to recording and secure viewing, our team integrates the equipment and provides ongoing support through AMC arrangements where required.

END-TO-END CCTV DELIVERY

Design & Coverage

Site survey, camera positions and coverage plans shaped around the property and its operating needs.

Camera Installation

Cameras, cabling, recording and network connections installed, configured and tested as one system.

Recording & Remote Access

NVR setup, user permissions and secure viewing paths for day-to-day monitoring.

Support & AMC

Preventive checks, troubleshooting and annual maintenance contract support under agreed terms.

SIRA Where applicable, CCTV designs consider relevant Dubai SIRA requirements. Regulatory approvals remain subject to the authority.

SIRA-Ready Security Expertly Delivered

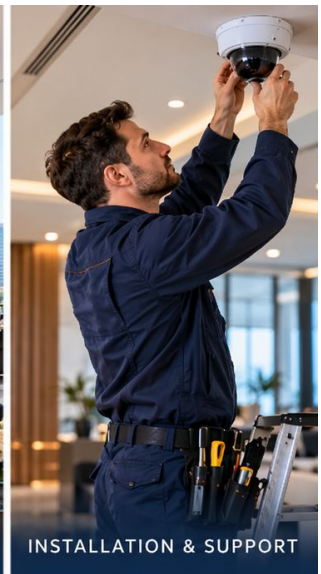

We provide SIRA-aligned CCTV and security solutions for businesses across Dubai, covering professional installation, technical documentation, audit preparation and coordination throughout the certification process.

RETAIL & JEWELLERY

COMMERCIAL OFFICES

INSTALLATION & SUPPORT

OUR EXPERTISE

CCTV Installation & Integration

Professional installation, testing and integration of CCTV and recording systems in line with applicable SIRA requirements.

Audit & Approval Support

Technical documentation, pre-audit checks, rectification works and coordination throughout the SIRA certification process.

Gold & Jewellery Security

Specialised security solutions tailored to jewellery showrooms, trading offices and high-value premises, integrating CCTV and other protection systems according to site requirements.

Annual Maintenance & Support

Preventive maintenance, system health checks, fault resolution and ongoing technical support to ensure reliable operation.

All approvals and certificates are issued by SIRA. Almoosa Security Systems provides technical and coordination support within its licensed scope.

Plans & Monitoring

We prepare CCTV layouts and technical documentation within our licensed scope, coordinating with SIRA-licensed security consultants where required. We also support Video Guard and e-Guard connections for applicable premises.

SPC

Security Plan Certificate. Issued by SIRA for an approved security-system plan. We support technical drawings and revisions within our licensed scope, coordinating with SIRA-licensed consultants where required.

SVG

Scalable Vector Graphics. A drawing file format, not a certificate. We prepare vector layouts for CCTV and security systems where the applicable workflow calls for them.

SIRA MONITORING SYSTEMS

Video Guard

SIRA's CCTV monitoring system tracks performance and faults. We prepare camera, recorder and network connectivity and provide technical support where it applies.

e-Guard

An advanced Video Guard arrangement linking CCTV with intruder detection. Automatic LTE backup takes over if the main WAN connection fails.

Compatibility is confirmed for each site.

We configure and maintain systems within our licensed scope. We do not operate SIRA's monitoring platform.

Secure People Control Access

From smart cards and biometric authentication to mobile credentials, electronic locking and centralised access management, our solutions provide secure, seamless control across individual doors, buildings and multiple locations — with integration into your wider security infrastructure.

Support & maintenance

Vehicle Access, Designed Around Your Site

We design and integrate ANPR cameras, automatic gate barriers and vehicle detection systems to provide controlled and efficient vehicle access for commercial and residential properties.

ONE COORDINATED ENTRANCE

Recognise

ANPR cameras capture vehicle registration plates at entry and exit points. Camera positioning and lighting are planned for reliable recognition.

Decide

Recognised plates are checked against authorised vehicle lists and access rules. RFID readers and visitor access systems can also be integrated.

Control

The barrier operates according to the access decision, supported by vehicle detection and safety devices. Access events can be recorded where supported.

Existing Installation?

We assess existing barriers, CCTV and access-control systems to determine what can be retained, upgraded or integrated.

SIRA Requirements

We review applicable SIRA requirements based on the premises and activity, including any equipment or regulatory approvals required for the installation.

Designed To Detect Built To Protect

Intruder alarm systems designed for offices, retail stores, warehouses and other commercial premises, providing reliable intrusion detection and timely alerts tailored to each site's security requirements.

Motion detection

Door & window contacts

Glass-break & perimeter detection

Zone-based arming & control

Audible & visual alerts

Panic buttons & emergency alerts

STRUCTURED CABLING

The Backbone Behind Every Connected System

Cat6 and Cat6A copper, fibre optic backbones, racks, patching, pathways, testing and documentation — designed, installed, tested and supported for offices, commercial buildings, warehouses and other properties.

Cat6 & Cat6A copper

Racks & patching

Pathways & management

Testing & certification

Labelling & documentation

NEW-BUILDING FIBRE READINESS

Telecom NOC Coordination

We assist with du and e& (Etisalat) submission preparation, technical drawings, material documentation, inspection coordination and handover records. Telecom NOCs and final acceptance remain subject to the relevant operator's review and approval.

OPERATOR COORDINATION

Reliable Connectivity, Designed End To End

We design, deploy and optimise reliable, secure and scalable networking solutions for corporate offices, commercial properties and industrial facilities—combining enterprise Wi-Fi, managed switching, intelligent routing and network segmentation to deliver seamless connectivity and dependable performance.

WHAT WE CONNECT

LAN & managed switching

Enterprise Wi-Fi solutions

Routing & secure connectivity

VLANs & network segmentation

Secure guest Wi-Fi access

**Network monitoring &
optimisation**

Engineered for coverage, capacity, security and long-term reliability.

An IT Department, Without Building One

Remote and on-site support, infrastructure monitoring, preventive maintenance and user administration under an agreed service scope — for businesses with no internal IT department, or those who want extra capacity alongside an existing team.

WHAT WE SUPPORT

- | | |
|---|--|
|  Helpdesk & User Support |  Infrastructure Monitoring |
|  Patching & Maintenance |  Email & Cloud Admin |
|  Network & Server Support |  Backup & Security Oversight |
|  Vendor Coordination |  IT Planning & Reporting |

IDEAL FOR

SMEs · Offices · Clinics · Retail · Business centres · Multi-site

Built For Performance Ready For Recovery

Scalable infrastructure and dependable data protection, designed around your operational needs.

Servers & Storage

Physical and virtual infrastructure planned for capacity, availability and room to grow.

Server architecture & deployment

Virtualisation & workload planning

NAS, SAN & recording storage

Infrastructure migration

Monitoring & support

Backup & Recovery

Practical protection and recovery planning for important systems and business information.

Server, VM & file backup

On-site, off-site & cloud options

Microsoft 365 data protection

Restore testing

Disaster recovery planning

Resilience Starts With Recovery Planning

Prepare for accidental deletion, hardware failure, site disruption and cyber incidents.

Business Communication Built Around Your Call Flow

We design, install and support IP telephony and PABX platforms — extensions, call routing, IVR, desk phones, softphones and network integration — scoped to your users, sites and call-flow needs.

Call flow, users, network and growth — planned first.

IP telephony & PABX

Call routing & IVR
